Introduction

I'm a Computer Engineering graduate with experience building web applications across both frontend and backend. I enjoy solving problems and developing reliable software that delivers practical solutions. Working across the stack has helped me understand how different parts of a system connect and scale. I'm interested in software engineering, system design, and continuously improving my skills through real-world projects.

Experience

Associate Software Engineer @ Hamro Patro Inc.

June 2025 – Present

Development and maintenance of a high-traffic platform generating USD 1.5 Million monthly revenue. Building scalable solutions serving thousands of active users. Maintained a high-traffic production platform handling millions of transactions, improved system reliability through idempotent enhancements, and implemented new features and performance improvements.

Hamro Remit

- I. Built international money order and supporting features.
- II. Implemented idempotent transactions to prevent duplicate financial operations during retries and network failure.
- III. Implemented Plaid for link and verify bank funding source.

Hamro Pay

- I. Session validation and security enhancement
- II. Optimized performance of the system

Software Engineer (Intern to Full Time) @ Information Care Pvt. Ltd.

July 2024 – May 2025

Delivered end-to-end system development for government and international clients, from ER diagram and database design to deployment and long-term maintenance. Built and maintained backend systems, designed database schema, developed APIs, and integrated frontend interfaces for internal dashboards and visualization tools.

Veterinary Medicine Order CRM

- I. Developed CRM system from scratch including ER diagrams, database design and backend implementation.
- II. Implemented and improved system workflow and user experience.

Lalbandi Municipality – Data Visualization

- I. Designed database and utilized materialized views to optimize data retrieval.
- II. Implemented data visualization features for local people of Lalbandi.

ConnectKisan

- I. Built bidding platform so farmers and customers can interact seamlessly.

MyPalika

- I. Developed local government management system in sector of (laws, registration, tax, etc.)
- II. Implemented GraphQL API for efficient data retrieval.

Skills

- Programming Languages: JavaScript, TypeScript, Python
- Frameworks: Express.js, NestJS, FastAPI
- Databases: PostgreSQL, MongoDB, MySQL, Redis
- Tools: Git, Docker, Postman, REST API, GraphQL, Linux

Personal Projects

International Money Order System

A backend solution through which international money order processing using Temporal workflows, Redis Caching, PostgreSQL and Stripe web-hook integration. Designed modular folder structure for maintainability and reliable transaction processing.

Tech stack: NestJS, TypeScript, Temporal, PostgreSQL, Redis, Stripe, Webhooks

Source Code Link: <https://github.com/parajuliaashutosh/nestjs-temporal-intl-money-order>

Kubernetes (K3s) home lab

A self-hosted kubernetes homelab focused on GitOps, container orchestration and infrastructure automation using K3s and Flux CD. For secure remote access without exposing public IP opening inbound ports, it integrates Cloudflare Tunnel, allowing private services running inside the home server to be securely exposed through cloudflares edge network.

Tech stack: K3s, Flux CD, Zot Registry, Docker, GitOps, Linux

Source Code Link: <https://github.com/parajuliaashutosh/k8s-homelab>

Registry Host Link: <https://registry.aashutoshparajuli.com.np>

Charitable – An online donation platform

A platform where users can donate clothes, books and where organizations can claim donation according to their needs. Implemented the backend using hexagonal architecture for maintainable and loosely coupled system design.

Tech stack: Java Micronaut, JPA, gRPC, RabbitMQ, Next.js

Backend Source Code Link: <https://github.com/parajuliaashutosh/charitable-backend-mn-grpc>

Frontend Source Code Link: <https://github.com/parajuliaashutosh/charitable-frontend-next>

Education

Himalaya College of Engineering, Tribhuvan University
Bachelor's in Computer Engineering

Kathmandu, Nepal

General Registered Engineer
Nepal Engineering Council

ID: 83472

Deployment Note: Most application are hosted in a home server environment, managing uptime limitations are caused by residential power and internet instability.
